

CREDENTI TECMFA

Desktop MFA for Okta Users

Overview:

Established in 1998 in Houston, Texas, Credenti is a leader in the technological and functional consulting space, boasting a large team of experts with significant experience in delivering Okta projects globally.

Solution Description:

Credenti TecMFA extends Okta's Multi-Factor Authentication (MFA) policies to desktop and laptop environments on Windows and Mac, enhancing security by requiring users to authenticate with additional factors besides passwords upon login.

Key Features:

- Integrates seamlessly with Okta's MFA & Policy framework to extend the MFA requirement to desktop logins.
- Supports MFA in both online and offline modes.
- Allows administrators to control the frequency of MFA prompts during the login process.
- Supports various authentication methods, including Okta Verify and U2F security keys.

Benefits

- Adds an extra layer of security for desktop environments.
- Facilitates compliance with corporate security policies.
- Simplifies the user authentication process while maintaining high security standards

Additional Information:

- Credenti has delivered numerous Okta implementations and is highly regarded within the Identity Access Management domain.
